Dear Hiring Manager,

I am applying for the Senior Database Marketing & Automations Specialist role at Go Auto Corporate (Mayfield, Edmonton). I live in Edmonton and can work on-site. At Lumin Marketing Group I build practical CRM automations in Go High Level and connect them to paid and organic campaigns for 2 active SMB client accounts. Earlier, I worked Fixed Ops customer flow at Audi Southgate, so automotive service journeys are familiar ground.

How I would support Go Auto automations:

- Design and maintain email/SMS customer journeys tied to lifecycle stages and clear business goals
- Keep CRM data organized enough that segments stay useful and campaigns stay compliant
- Monitor deliverability and performance, then recommend concrete A/B tests and next steps
- Partner with creative and data stakeholders so automations match real campaign needs
- Use Claude and Claude Code to remove repetitive ops work, with human review before publish

I am honest that I do not yet have deep day-to-day experience in Iterable, Marketo, Braze, or Klaviyo, and SQL is still growing. What I bring is hands-on CRM automation ownership, campaign reporting discipline, and automotive customer-context from Audi Fixed Ops. I am targeting base pay at or above CAD \$60,000. Resume attached.

Best regards,

Dylan Michael
